WP 2

Mapping quantum states of light into and out of atomic ensembles

PIs : A. Bramati, J. Laurat, E. Giacobino

Grad Students : S. Burks, M. Scherman, L.
Giner

Post Doc : O. Mishina

Quantum Optics
Laboratoire Kastler Brossel
UPMC, CNRS and ENS

*COMPAS meeting
Brussels, november 30th 2009*

Outline

- EIT-based *Quantum memory for coherent single sideband modulation*

PRL 101, 133601 (2008)

PHYSICAL REVIEW LETTERS

week ending
26 SEPTEMBER 2008

Reversible Quantum Interface for Tunable Single-Sideband Modulation

J. Cviklinski, J. Ortalo, J. Laurat, A. Bramati, M. Pinard, and E. Giacobino

Laboratoire Kastler Brossel, Université Pierre et Marie Curie, Ecole Normale Supérieure, CNRS,

- EIT and multilevel structure
- *Squeezed light at 852 nm*

Optics Express 17

3777 (2009)
QuickTime™ et un

ont requis pour visionner cette image.

- *Mapping photonic entanglement*

Quantum Memory with Cs vapors

Cs vapor, D2 line at 852nm

- Paraffin coated cell, room T
- Magnetic shield with a set of coils (~ 1 to 3 Gauss at 10^{-3})
- $T_2 \sim 200$ s (measured by RMO)

« Signal » = Single Sideband Modulation

EO modulators

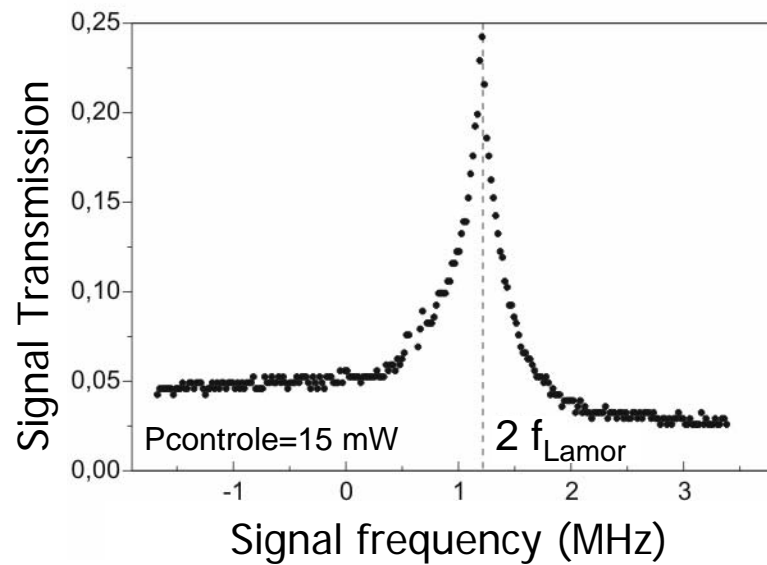

- Easy to use : Single sideband or double
- Carrier of orthogonal polarization , which provides a phase reference

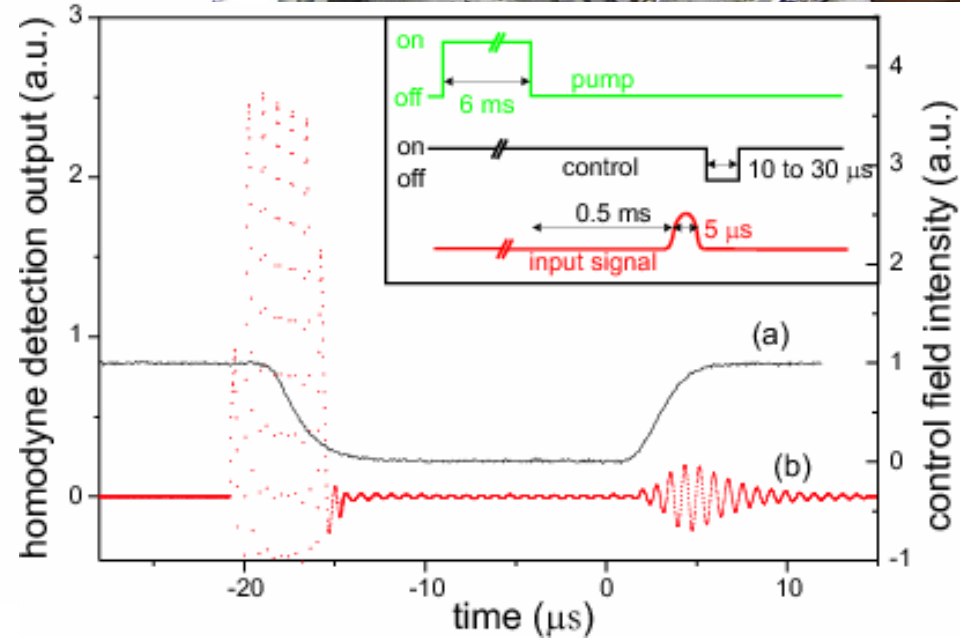

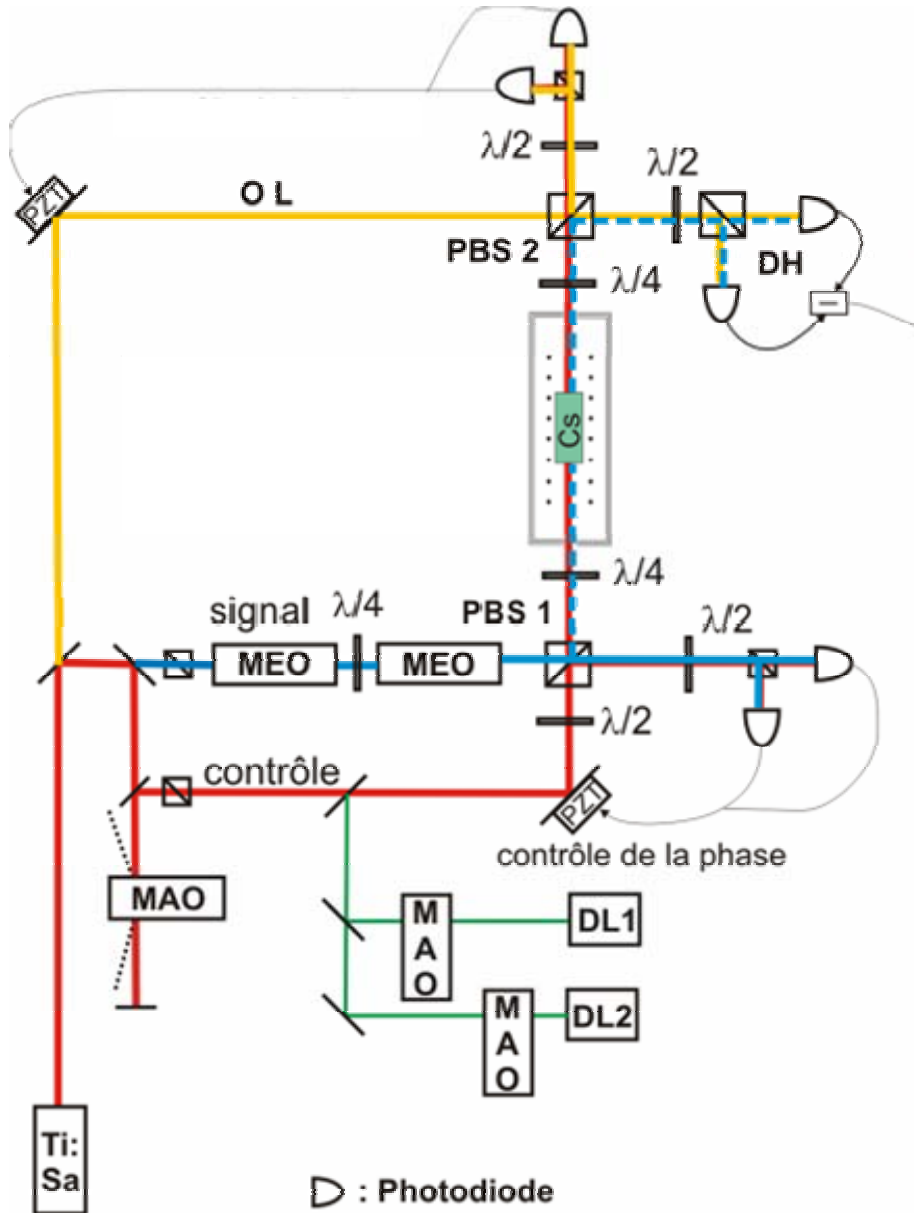

EIT Window : Position and Width

- Width given by control power
- EIT window position can be adjusted

Experimental Setup

Experimental Results

Phase coherence

- Input phase retrieved
- Phase shift accumulated during storage due to non-perfect two-photon resonance

Retrieval efficiency

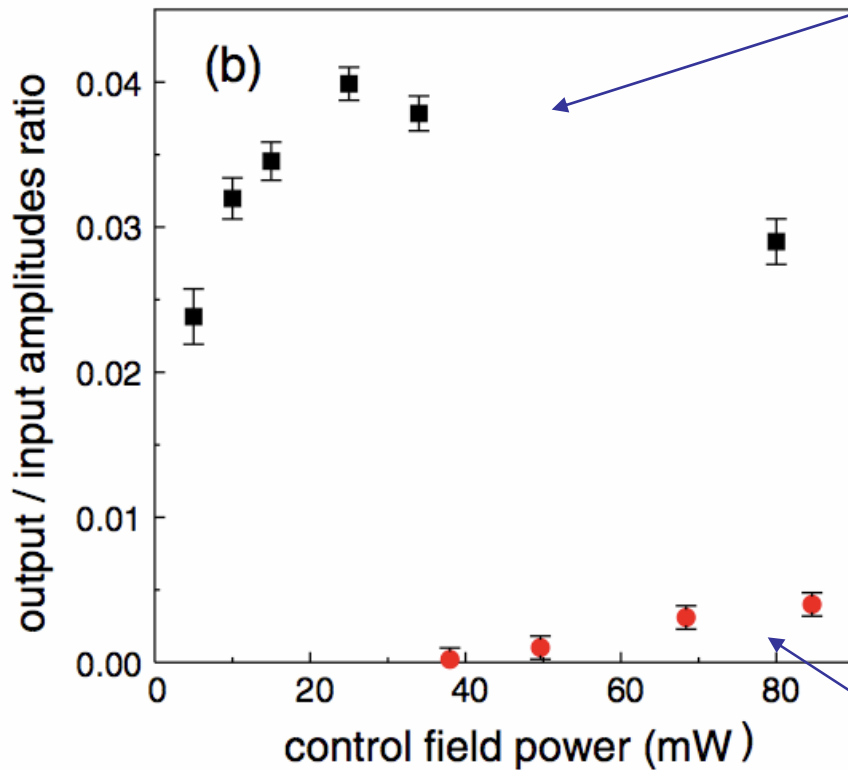

- 20% for short time

J. Cviklinski et al., "Reversible quantum interface for tunable single sideband modulation", Phys. Rev. Lett. **101**, 133601 (2008)

Single Sideband vs Double

Single SideBand ($\Omega = 1,25$ MHz)

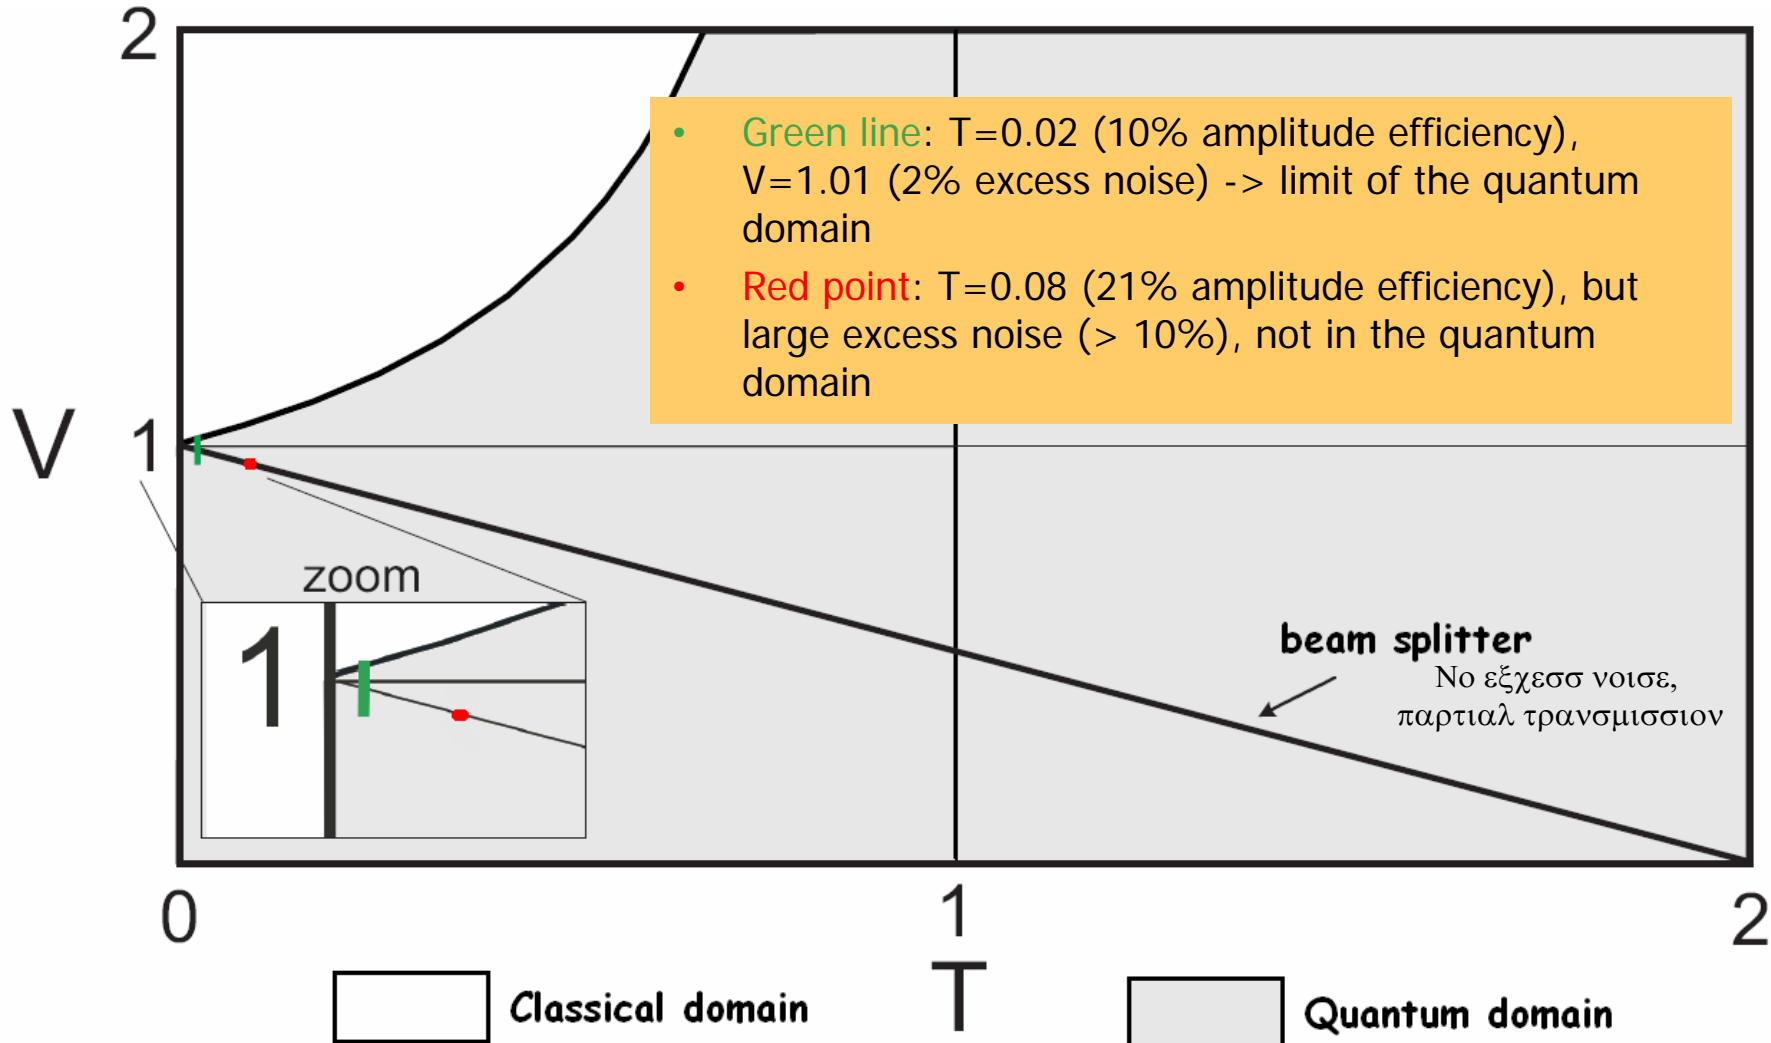

Double SideBand ($\Omega = 400$ kHz)

- EIT window position matched to the frequency of the signal

A quantum memory

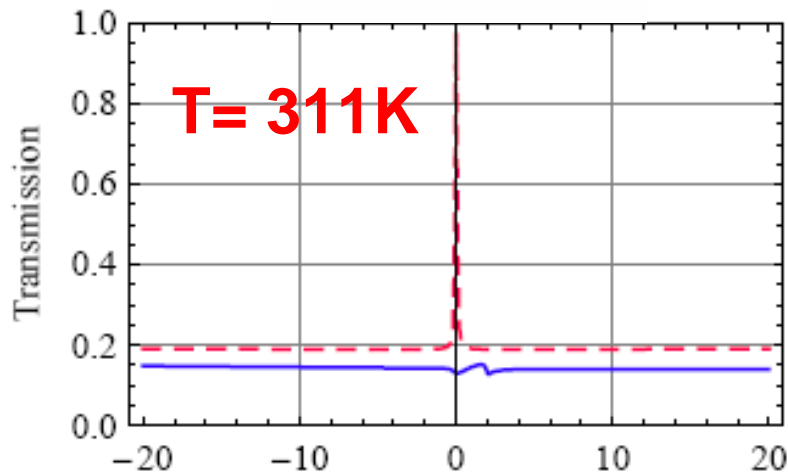

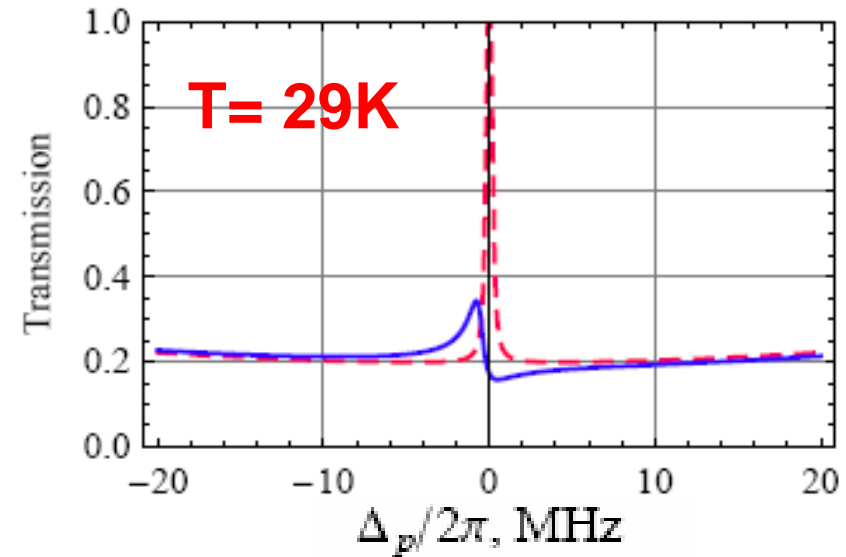

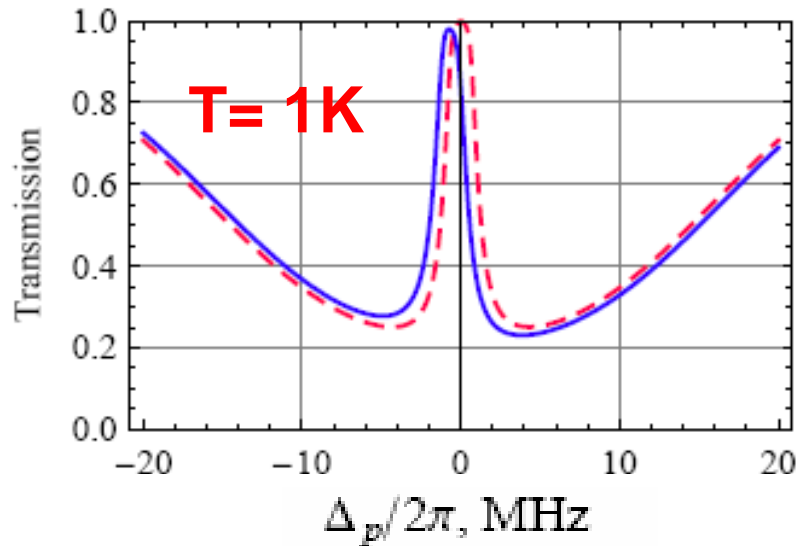

J. Cviklinski et al., "Reversible quantum interface for tunable single sideband modulation", Phys. Rev. Lett. **101**, 133601 (2008)

EIT and multilevel structure in Cs D₂ line

Red : 3 level
Blue : 6 levels

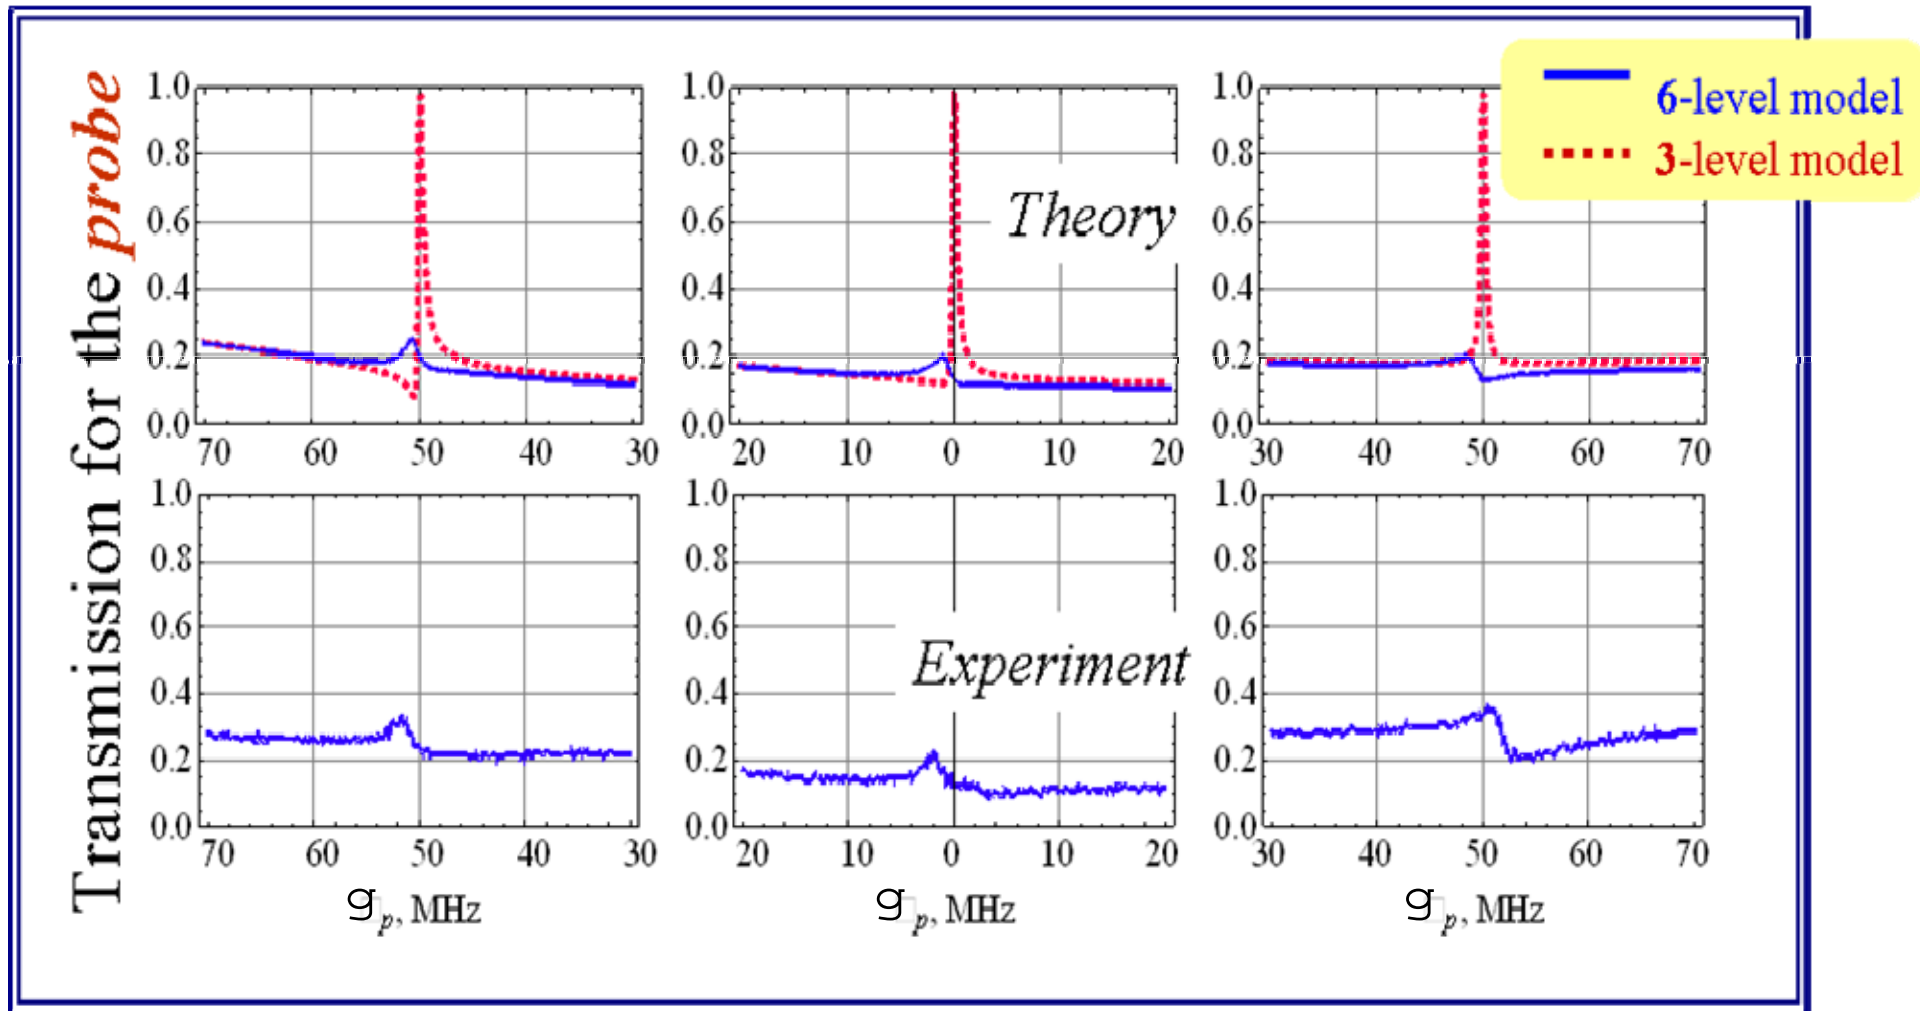

No effect for cold atoms

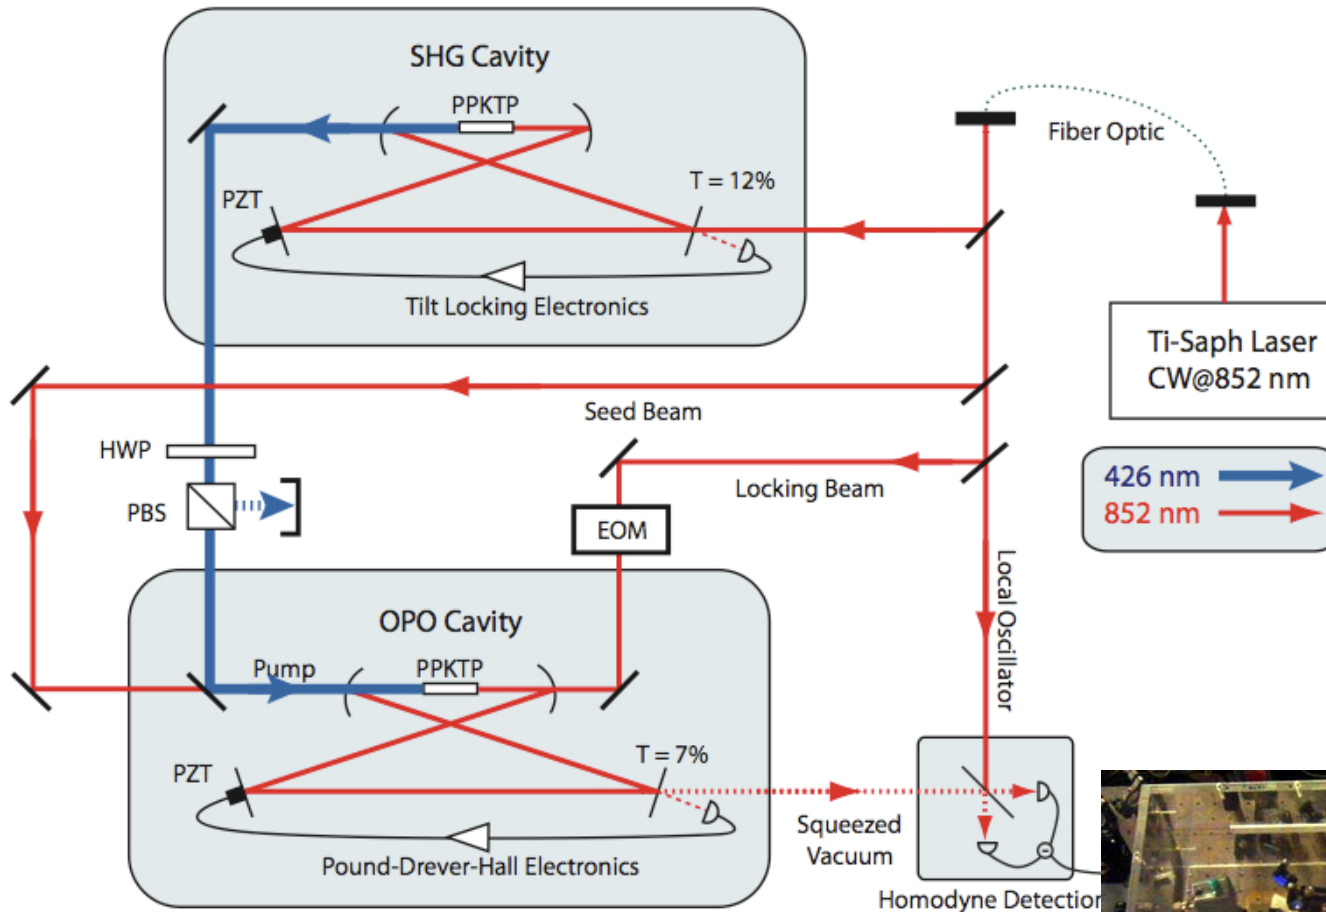

QuickTime™ et un
décompresseur
sont requis pour visionner cette image.

EIT: experiment/theory in vapor

Need to include a partial effective cooling: velocity-selective optical pumping

Squeezing at 852 nm (Cs D₂ line)

Squeezing Results

- 3dB down to 50 kHz
- In progress : storage of squeezed state in Cs vapor

S. Burks et al., "Squeezed light at the D2 cesium line for atomic memories", *Opt. Express* **17**, 3777 (2008)

Mapping Bipartite Entanglement Into and Out

Idea

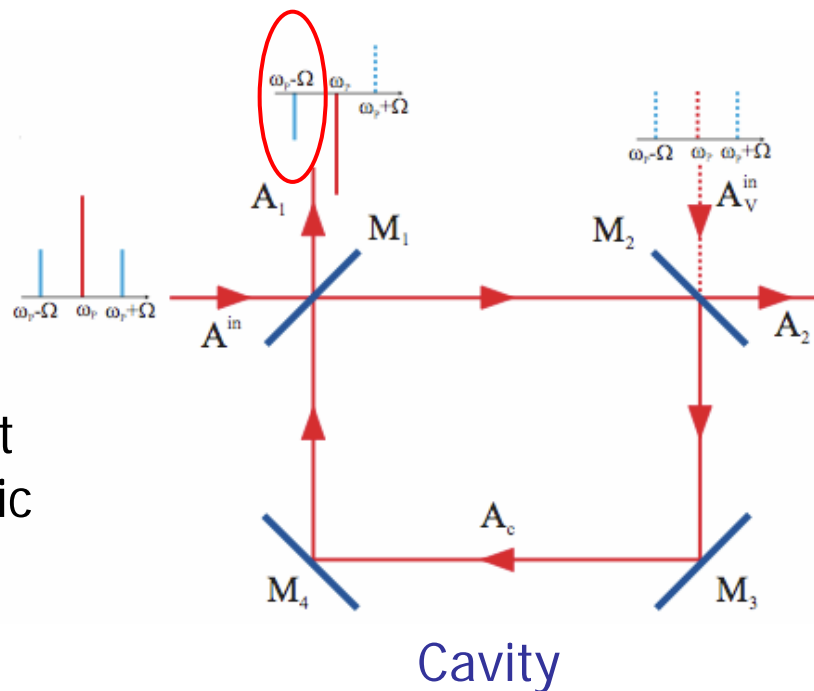

How to generate CV entanglement ?

Squeezed light

= entanglement
between symmetric
sidebands

New Cold Atom Setup

- 10^9 atoms
- Glass chamber to decrease residual magnetic fields
- Quasi-2D MOT for large OD

Summary

- EIT-based *Quantum memory* for *coherent single sideband modulation*

Phys. Rev. Lett. 101,
133601 (2008)

Journal of Physics B,
42, 114010 (2009)

- EIT and multilevel :

- Squeezed light at 852 nm*

Optics Express 17,
3777 (2009)

- Mapping photonic entanglement*
